What I Learned

- **File Handling in Java:** I gained hands-on experience with reading and writing files in Java using Apache POI for Excel and standard I/O for text files.
- **Maven Dependency Management:** I learned how to manage project dependencies using Maven, ensuring all required libraries are included for smooth execution.

Challenges Faced

- **Dependency Issues:** Initially, I faced issues with missing Apache POI dependencies. This was resolved by correctly adding the required dependencies in the pom.xml file and updating the project in the IDE.
- **File Format Understanding:** Understanding the structure of Excel files and how to manipulate them using Apache POI was challenging. I overcame this by consulting the official Apache POI documentation and examples online.
